PowerPoint or Google Slides Animation

Directions

1. Create a background setting using **Paint.** The setting should be as realistic as possible, providing a place for the ball to bounce. DO NOT DRAW THE BALL IN THE BACKGROUND! You will add it later in PowerPoint or Google Slides. (**Save** you**r** picture and name it "background").

2. Open **PowerPoint or Google Slides**.

3. Click **Insert > Picture** and find your background image. Once it is inserted onto the slide, stretch it to fill the page.

4. In the **"Slides"** view (The little image of the slides), right click on the slide and click **Edit > Copy**. Then right click **Edit > Paste**. Keep cliking Edit > Paste until you have 15 slides.

5. **On the second slide**, draw a ball using the **Oval** tool (**Insert > Shapes**). Color it in using the **Fill Color** under the **Format** menu.

Place the circle halfway up the page and halfway off the page on the left side (This makes it look like it is coming from the left side of the scene).

6. **Copy** the ball on slide two and **Paste** it into slide three, slightly lower and to the right a bit. The entire ball should be on the page.

7. Repeat step 6 about 10 times, always placing the ball farther along its path, so it looks like the ball is bouncing across the page.

For a more realistic project, try drawing an oval shaped ball for the points at which it touches the ground. (see example below)

8. When you have all of the slides finished go to **Slide Show > Rehearse Timing**. Start clicking the **space bar** at the pace you want your show to move. When you get to the end click on the **Yes** button when it asks you if you want to keep the timings you set.

9. Click **Slide Show** then click **Set Up Show**. Under **Show Options** (Middle Left) click the box that says, **"Loop continuously until 'Esc'"**
